Catalogue of Potential Data Modernization Projects

The table below will include a comprehensive list of the data modernization projects included within the data modernization venture at the health department based on the answers to the self-assessment activities. This catalogue will help to determine what is within scope and which projects should be prioritized.

Directions

1. Record challenges and gaps identified from self-assessment activities in the left column. For each challenge, recast the challenge as a project opportunity by thinking, "how could the health department overcome this issue?" or "how would this work if it was working well?" For some challenges, the solution will be outside of the health department's scope or span of control; when this is the case, identify this in the notes.

2. As each project opportunity is discussed, record notes about scope and scale, potential project leadership, essential partners, cost, existing assets or anything that could influence that project's prioritization.

Sample text is provided in the table below to help understand how to complete the exercise. Edit or replace to fit the health department's needs.
